*Note also, that the Exchequer openeth eight
dayes before any Terme begins, (except Trinity
Terme) in which it openeth but foure dayes be-
fore.*

A description of the foure Quar-
ters of the yeare.

And first of Winter.

☉ in ♍ ≈ ♋.

THe winter Quarter *Astronomically*, for this yeare 1638. began the last passed yeare 1637. upon tuesday the 12. day of December, when the Sun did enter the first degree of *Capricorne*, and doth end this yeare upon Sunday the 11. of March: for then the Sunne entereth into *Aries*, making the first Equinoctiall.

This winter Quarter of his proper nature is cold and moist, and of complexion Flegmaticke, good for whole and sound people, but dangerous to those that are sicke and diseased. In this season the inward parts of every sensible creature are very hot, and (being healthfull) they may receive great plenty of foode.

B 2

because

Dade. 1638.

because naturall heate is now confortd, for it is driven inwards, and there increaseth and maketh the digestion more strong.

The Sickneses whereunto this Quarter is most inclined, are Rheames, Gouts, Palsies, Pishes, sore Eyes, Melancholy, Coughes, Catthers, Sciaticaes, paine in the Brest and Lungs; with divers infirmitie's incident among Women. &c.

*Of the second Quarter of the yeare
called the Spring.*

☉. in ♋. 8. II

THe Spring time being the second part of the *Astronomicall* yeare, taketh his beginning on Sunday the 11. day of March when the Sun entereth into the first degree of *Aries* the Equinoctial point, making the dayes and nights of equall length.

This Spring Quarter continueth untill twelofday being the 12. of Iune following, when the Sun enters into the signe *Cancer*.

This Season is naturally hot and moist, and is of the Sanguine complexion, being the most temperate and healthfull time of the yeare; yet bringeth it (or rather sheweth forth) many diseases, not ingendering them
by

A Prognostication.

by excessse, but discovering them which were inwardly bred by the distemperature of other times: yet it is the most fitting Season to expell diseases that have beene of any long continuance.

The infirmities of this Quarter are Measels, Small pockes, Scabs, Agues, Chollick, burning Feavers, and others, proceeding of corrupt bloud.

Of the third part of the yeare, called Summer.

☉: in ♋. ♏. m.

THe Summer, (accounted the third part of the yeare *Astronomicall*) being naturally hot and dry, and of the Cholericke complexion, doth begin at the Suns entrance into the first degree of *Cancer*, which will be this yeare upon tuesday the 12. day of Iune, where he maketh his Summer Solstice, and hath his greatest declination to the North from the Equinoctiall; Now are the dayes longest and the nights shortest, and the Summer doth continue untill thursday the 13. day of September.

Now cannot the stomacke digest such hard
meates

Dade. 1638.

meates as it may in the winter season, for the naturall heate is now distributed unto the exterior parts, and man is not now so hot within as in winter.

The Sickneses of this Season generally are hot Feavers and burning Agues, Scabs, Pusshes, Jaundies, Vomits, sore Mouth and Throate, with paine in the Head and Backe.

*Of the fourth part of the yeare called
Autumne or Harvest.*

○. in ♋. m. 4.

A Vtumne or Harvest, being the fourth and last part or Quarter of the yeare (with the *Astronomers*) being naturally cold and dry, and of the malencholy complexion, be-
ginneth on thursday the 13. day of Septem-
ber, when the Sun forsaketh the last degree of *Virgo*; and then he entereth into the first de-
gree of *Libra*, where he then maketh the E-
quinoctiall Hyemall, working the same effect
that he did at his going into *Aries*, that is,
making the dayes againe of an equall length
to the nights, herising at six in the morning,
and setting at six at night; and this Quarter
doth end on wednesday the 12. of December.

Of

A Prognostication.

Of all the other Quarter this is the most unwholsome, for it is more subject to sicknesses then any other, for the dreggs of all diseases of the former part of the yeare will burst forth and shew it selfe.

The diseases of this Quarter are many and dangerous, as Black-jaunders, falling-sickness, dropsies, Consumptions, Megrims, Byles, Emrods, Tooth-ach, Spleene, Cramps, Coughs, Melancholy, &c.

A Briefe description how the Planets are placed above the Earth in the Skie, for every Moneth after Sun-setting, or before his rising; by which you may perceive how they keep their motion day and night all the yeare. Moreover, the New, Full, and Quarters of the Moone, with Astrologicall judgment of the weather for each day of the yeare.

Also Husbandry Instructions for each Month of the yeare.
